### DETAILED ACTION

1. Receipt is acknowledged of the response filed on 16 November 2006, which has been entered in the file.

2. The declaration under 37 CFR 1.132 filed 16 November 2006 is sufficient to overcome the rejection of claims 1-10, 12-15, 25-34, 36-39, 49 and 50 based upon Ekchian et al. (US 4,862,160) in view of Appalucci et al. (US 5,841,350).

### ***Election/Restrictions***

3. Claims 49 and 50 are allowable. Claims 16-24 and 40-48, previously withdrawn from consideration as a result of a restriction requirement, requires all the limitations of an allowable claim. Pursuant to the procedures set forth in MPEP § 821.04(a), **the restriction requirement between inventions Groups, as set forth in the Office action mailed on 30 June 2005, is hereby withdrawn** and claim 16-24 and 40-48 hereby rejoined and fully examined for patentability under 37 CFR 1.104. In view of the withdrawal of the restriction requirement, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

***Allowable Subject Matter***

4. Claims 1-50 are allowed.
5. The following is an examiner's statement of reasons for allowance:

The best prior art of record to Ekchian et al. (US 4,862,160) discloses an inventory data acquisition system comprising a plurality of transponder attached on the items wherein the transponder transmit uniquely assigned frequency signal to the transceiver upon receiving of interrogating signals.

However, Ekchian et al. taken alone or in combination with other references fails to particularly teach that the method and apparatus measures the frequency of the received signal from the set of interacting tags determining the frequency shift of the combined signal in comparison of the set of tags to determine the property of the interest, utilizing the frequency shift between the measured frequency and the reference frequency in determining the desired parameter with respect to the set of interacting tags as argued by the applicant, the declaration presented by the applicant shown that the method of Ekchian et al. does not function as intended when the tags are close together.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
